

## **Elements of the green industrial revolution include:**

- Transitioning from an unsustainable fossil fuel economy to a sustainable green economy.
  - Fair distribution of the costs and benefits of economic transition.
  - Implementing tools like taxes on carbon to increase the financial cost of using fossil fuels, and investing the resulting revenues in climate action.
  - Creating well-paying jobs through systems that are designed to reduce carbon emissions, and that make communities more resilient to climate change impacts.
-
